# Universal PPSU Eurocone Adapter

- 1 Versatile construction**  
Cooperation with uniform PE-Xc, PE-RT, PE-RT Blue Floor pipes as well as multilayer PE-RT/Al/PE-RT pipes.
- 2 Absolute resistance for corrosion processes, no matter water quality**  
Eurocone body is the main structure element in direct contact with the heating medium or potable water. Thanks to high quality PPSU plastic, it is completely resistant to corrosion processes.
- 3 High resistance to temperature and pressure**  
Thanks to the PPSU ability to withstand high temperatures (continuous operation even up to 190°C), Eurocone body is fully resistant to typical operating parameters in common installations (heating, cooling, potable water systems). PPSU Eurocone may operate within the same parameters as it's brass counterpart.
- 4 Tightness warranty**  
Specially reinforced design of retaining ring guarantees 100% tightness of the connection as well as it's mechanical durability.
- 5 High hygiene aspect**  
The absolute neutrality of PPSU plastic in relation to drinking water ensures it's high quality at all times.

## Safe assembly

High quality brass nickel plated nut provides safety during assembly with wrench.

# 6

## Energy efficiency

High thermal resistance of PPSU reduces local heatlosses during medium transportation.

# 7

## High quality and material stability

100% repeatability of products. PPSU production technology practically excludes the possibility of formation of any hidden defects. New System KAN-therm PPSU Eurocone adapter is the optimal combination of high product quality, functionality and attractive price.

# 8

**The element is covered by a 10 year  
System KAN-therm warranty**
