About KAN

Innovative water and heating solutions

KAN was established in 1990 and has been implementing state of the art technologies in heating and water distribution solutions ever since.

KAN is a European recognized leader and supplier of state of the art KAN-therm solutions and installations intended for indoor hot and cold tap water installations, central heating and floor heating installations, as well as fire extinguishing and technological installations. Since the beginning of its activity, KAN has been building its leading position on such values as professionalism, innovativeness, quality and development. Today, the company employs over 800 people, a great part of which are specialist engineers responsible for ensuring continuous development of the KAN-therm system, all technological processes applied and customerservice. The qualifications and commitment of our personnel guarantees the highest quality of products manufactured in KAN factories.

Distribution of the KAN-therm system is performed through a network of commercial partners all over Poland, Germany, Russia, Ukraine, Belarus, Hungary, Ireland, the Czech Republic, Slovakia, Romania, in Scandinavia and in the Baltic States. Our expansion and dynamic development has proven so effective that KAN-therm labeled products are exported to 60 countries, and our distribution network assumes Europe, a great part of Asia, and a part of Africa.

The KAN-therm system is an optimal, complete multipurpose installation system consisting of state of the art, mutually complementary technical solutions for pipe water distribution installations, heating installations, as well as technological and fire extinguishing installations. It is the materialization of a vision of a universal system, the fruit of extensive experience, the passion of KAN's constructors, as well as strict quality control of our materials and final products.

TECHNOLOGY OF SUCCESS

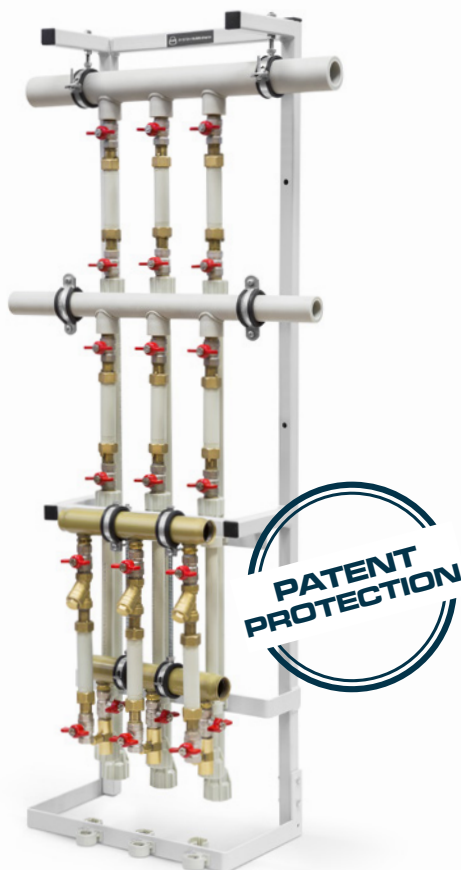

Use Well-Studied Solutions

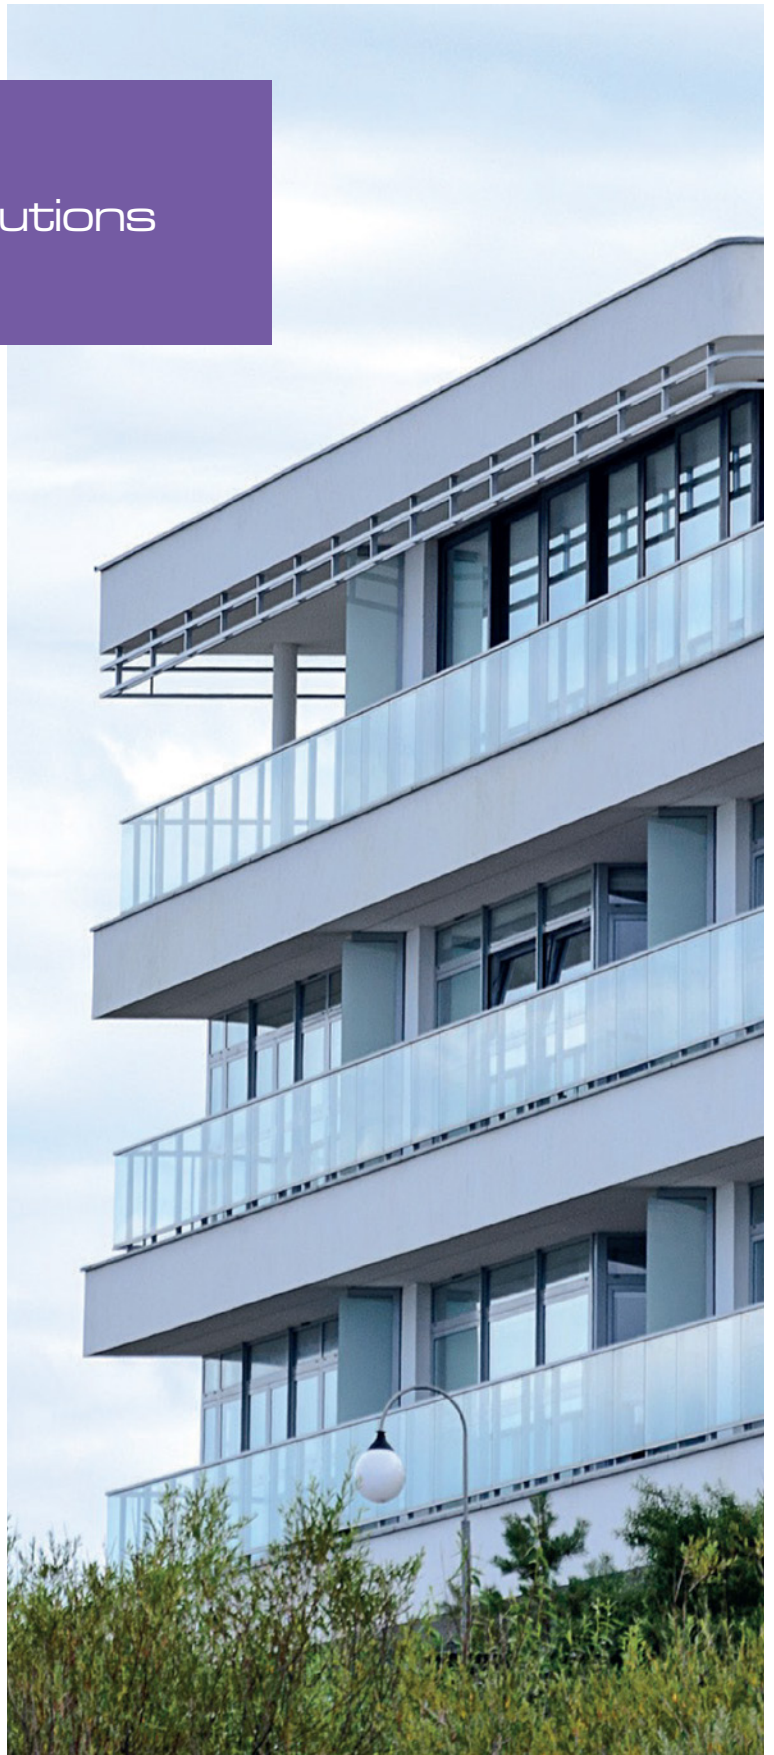

ZRM units are pre-fabricated sets of connection outlets, designed for supplying apartments in multi-family housing developments in **cold and hot tap water**, as well as heating medium.

It makes possible to establish measuring points for heating installation, and tap water in one compact design.

Innovative, compact, and offering very convenient technical executions - it is a solution never before present in the installation market. Legally protected design by patent.

**PATENT
PROTECTION**

Solution created for multi-family housing developments

By choosing ZRM units (residential manifold sets) you save valuable time, get additional floor space and unique aesthetics.

Employment of ZRM units allows to **save time** required for mounting, which translates to **cost reduction** and faster completion time of apartments' interior finishing and their sale.

This **innovative product** is ready to be connected to installation risers, thus allowing for instant pressure tests.

Compact design, based on a frame with manifolds is, both, an aesthetic and functional solution, as it allows for saving valuable floor space.

New quality in installations

Configuration Versatility

The design allows for usage of any control and measurement equipment available in installation market.

Compact Design

Small size of ZRM units allows for reduction of installation shaft dimensions and saving valuable floor space.

Short Installation Time

Ready-made structure considerably reduces time needed for the process of system preparation at a construction site, which translates to savings of time and costs.

Instant Pressure Tests

Fast installation and possibility of conducting instant pressure tests accelerates the process of building commissioning.

Recovery of Living Space

Minimised dimensions of the set, allows for the possibility of mounting it in narrow shafts, meaning measurable savings in building's floor space.

Fast Installation

The complete product is ready for easy and fast installation and does not require introduction of additional modifications and changes.

Design Clarity

ZRM unit is a solution unique to the market - an example of an innovative approach to installations in multi-family housing developments. Compact design, based on steel frame, is a matter of not only a high aesthetics, but also of a functionality.

1 Cold potable water module

2 Hot water module

3 Central heating module
